

MOBILE ANAESTHESIA MACHINE

Affordable and simple solution for gas anaesthesia in companion animals.

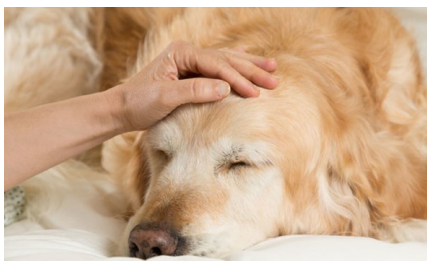

Equipped with Cage-Mount vaporizer of Isoflurane or Sevoflurane (according to needs).

The flush button is recessed to avoid unintentional activation and is calibrated at 50 lpm for safer use, reducing the risk of high pressure in the patient's lungs.

It has an accessory tray to place monitors or ventilators safely.

Features

- Rotameter 0.1 to 4 LPM O2 for more accuracy of the administered flow
- O2 emergency valve (Flush) out of reach of involuntary activations, to avoid accidents.
- The body of the equipment and the absorber are integrated in one piece, to reduce the number of connections and, consequently, the risk of leaks.
- Quick connection of fresh gases to shift quickly and safely between circuits.
- Vaporizer mounted on Cage-Mount system, to facilitate the change of vaporizers if necessary.
- Very stable base with 5 wheels for transport.
- Large 1500 ml soda lime absorber designed for quick and easy filling. It has a built-in condensation trap.
- 5 years warranty.

Included in the unit:

- soflurane or Sevoflurane vaporizer
- Y patient circuit
- Rebreathing bag 2 liters
- Rebreathing bag 3 liters
- Fresh gas pipe
- Krytox grease
